

WATERPROOF

ALUMINUM DECKS

Experience a truly maintenance-free deck that will outlast all others!

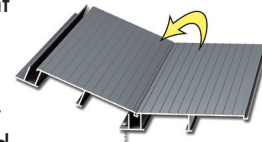

REVOLUTIONARY ALUMINUM DECKS

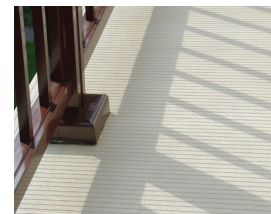

Made of extruded aluminum, Betterliving's **Waterproof Aluminum Deck** outlasts any wood, vinyl, or composite decks. It does not twist, warp, or fade like other decking products, so every board appears like new for decades. It's truly maintenance free, allowing you more time to relax outdoors.

The deck boards join together under a pressure-locked seal to create a waterproof* joint and gapless floor. Although it's unlikely for moisture to get past the pressure lock, there is a built-in continuous gutter in each board for water management. The unique design of the boards creates a dry area underneath for additional living space with second-story decks.

Our aluminum deck installs on treated or untreated wood joists in about the same time as wood decks, but you won't have to worry about maintenance! Only high strength aluminum is used assuring you of strength and reliability.

NO Painting • Staining • Waterproofing • Splintering
Cracking • Rotting • Warping • Decaying
Knot Holes • Bonding and Glue Issues
Hidden fasteners eliminate worry about nails or screws popping.

NON-SKID

An embedded texture in the heavy-duty powder-coated finish makes each board **non-skid**, keeping your family and friends safe.

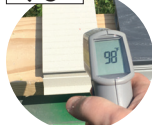

NON-COMBUSTABLE

Unlike composites, vinyl, or wood decks, **aluminum does not ignite or burn.** It also won't deteriorate from UV rays. Ideal for outdoor grill areas.

COOL TO THE TOUCH

Where other products burn your skin, **aluminum stays cool to the touch.** In a test performed at 86° in direct sunlight, decking surface temperatures registered:

98°
